

PortalMap24

Interactive routing and mapping solution for your website

Routing and mapping solutions are one of the most wanted services on the internet. The Map24 ASP (Application Service Provider) service enables your business to distribute individual content combined with mapping and routing facilities on online maps. Below is a description of the main features of our PortalMap24 solution.

Features of PortalMap24 at a glance:

✓ Basic function

- Integrated map application on your company website
- Geocorrect display of your locations on frequently improved maps on Western Europe and North America, on the main road level nearly worldwide.
- Visualization of your locations including logo, link and an individual text
- Map display on static (Bitmap) or interactive and animated vector maps
- Free address and proximity search
- Free routing between optional addresses or pre-defined locations
- Tunneling: display your locations along a calculated route

✓ Optional functions

- Individual skin development, design, setup and integration
- Geocoding of large address databases
- Modern XML/SOAP-interface

Your benefits:

- Use of the inimitable MapTP technology
- Easy integration by your web designer or our NAVTEQ Map24 team
- Your corporate identity is protected
- NAVTEQ Map24 support

Costs:

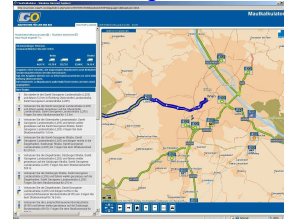

- Licensing of PortalMap24 is transactions based, i.e. traffic volume will determine costs.
